GEOGRAPHICAL INFORMATION SYSTEMS FOR DEVELOPMENT IN THE GLOBAL SOUTH

**Open GIS Tools and Case Studies in
Development Cooperation Projects**
Dr. Giuliano RAMAT -Università di Firenze

**Mapping sanitary risks arising from
street grilled chicken in Ouagadougou**

Dr. Yaméogo LASSANE – Université de
Ouagadougou (Burkina Faso)

ABSTRACT – Geographical Information Systems (GIS) are powerful tools of spatial data visualization and analysis. Their use can support Development Cooperation projects, providing new spatial analysis tools and innovative participatory methods. On the other hand, they can lead to the exclusion of some communities, due to digital divide and a Western-oriented approach to spatial representation. The aim of this seminar is to discuss critically about the role of GIS in Development Cooperation in the Global South, starting from case studies.

The event is part of the of the GIS for International Cooperation course program (prof. G. Pettenati).
